Title	Remixing - Learning with un lapin
Brief description of clip	Using Mozilla's Popcorn Maker tool, an existing video clip is repurposed for language learning by overlaying speech bubbles with text.
Difficulty rating of production (easy/intermediate/ complex)	easy
Recommended CEFR level	A1+
Technical details	The tool allows users to work with any publically available video content and remix it, adding text pop ups, images, information from Wikipedia or google maps, editing the audio and adding other effects. The project can be saved by creating an account and is entirely web based. It can be shared using the URL or embed code. Bear in mind that web based creations may only be available subject to certain conditions, if an account is rarely used they resource may disappear. It may be best to create a school or class account for your activity.
Suggestions (preparation/pre and post activities)	Chosen video content is reviewed and learners brainstorm how it can be enhanced for language learning. They use post-it notes to create a wall of suggestions. In groups they remix the video to create a new resource and share with each other. Using short clips made by the learners can be very engaging as the stories they intended can be transformed when remixed. Lots of opportunities for communication in the target language too as you compare the remixes.
Ideas for application in different contexts	The nature of the clips can be altered for more detailed project work. A clip on a news item for example could be enhanced with text or links to other sources of information or interactive polls making the activity more suitable to an advanced audience.
